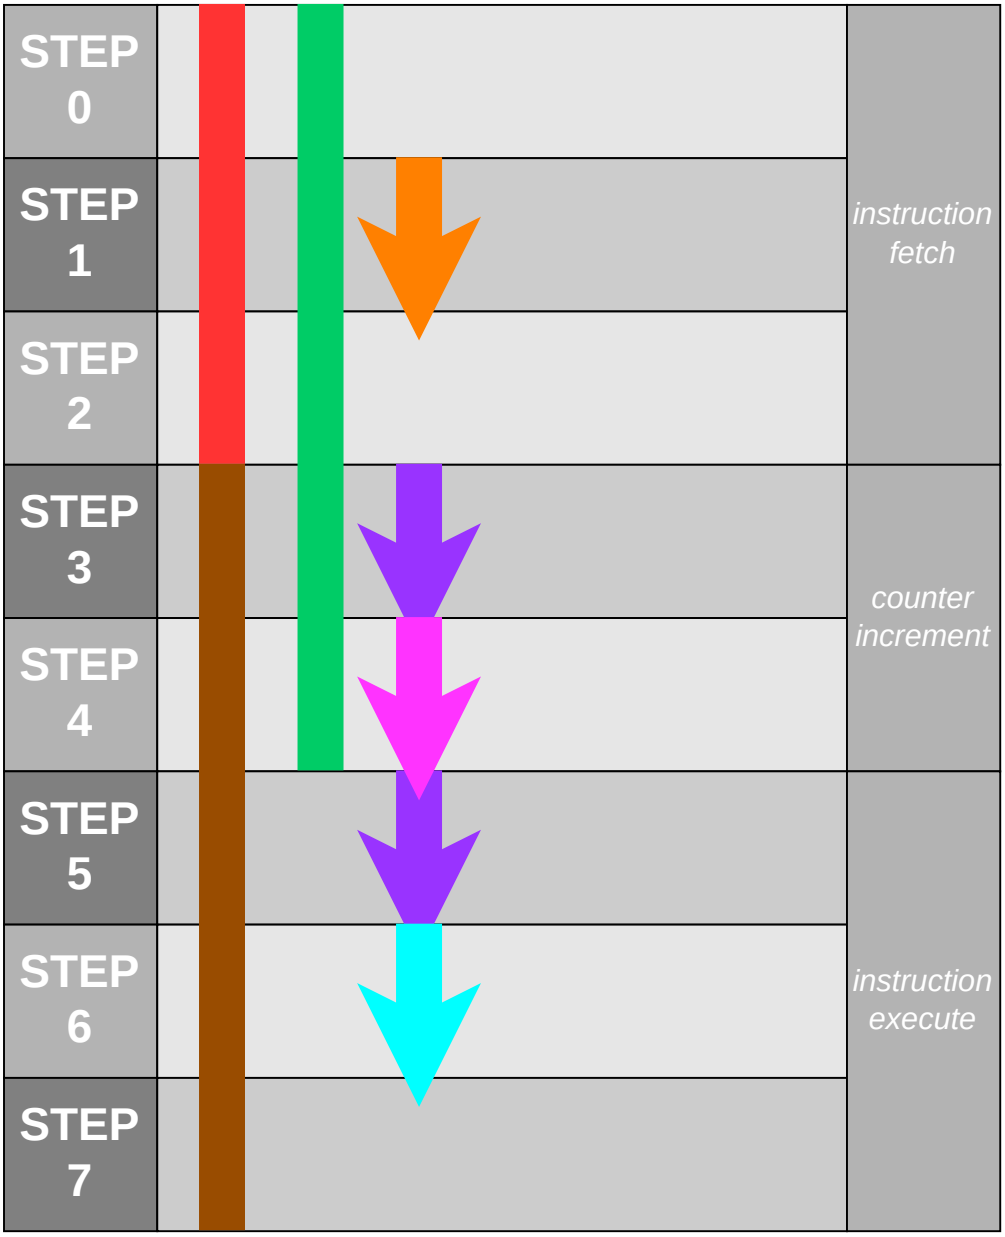
Instruction excution cycle (16-bit variant)



INPUT_M - CPU set into data input mode
SRC_R - Instruction's source released
IR_OD - Instruction register output disable (Preparation to execute special instruction)
FETCH - fetches instruction into IR
INPUT_GR - inputs data into gate register (Acts as gate between in and out data bus wihin CPU)
INPUT_PF - Inputs pointer file (On address of current program counter)
EXE - Executes current instruction

Jednostava CPU arhitecture
